

ABSTRACT

~~The invention provides a front end part (7) for the engine hood (3) of a vehicle, the~~
front end part for the engine hood of a vehicle that can accommodate small deformations that
result from impacts at low speed or other kinds of thrusts without there being any damage to
the hood. The part being made of a deformable plastics material and including ~~means a~~
strength member for fixing it to an engine hood so as to extend the hood towards the front of
the vehicle. ~~The invention also provides a vehicle front face including~~ can also include such
an end part in addition to a hood and a bumper.
